

Cleaning Pigs

EDX

16" - 48"
406mm - 1219mm

Options

- Bi-directional carbon steel, stainless steel or plastic brushes.
- Plate magnets can be easily mounted to recover any ferrous debris in the pipeline.
- Transmitter cavity for tracking equipment.
- Protector bumper noses.
- Aluminum or steel gauging plates are available in either slotted or standard.

Description

The **EDX** series of cleaning pigs are designed for the bi-directional cleaning of newly constructed lines or for existing lines where scale and debris are present. It is also an excellent choice for air or water displacement applications during the pressure test stage of construction.

Features

EDX is an economical 6 disc bi-directional pig which offers an optimum seal and also allows for aggressive cleaning with wear compensating, spring loaded brushes. The pigs are equipped with durable guide discs designed to center the sealer discs in the line, forming a quadruple seal that virtually eliminates product by-pass.
