

**Displacement  
Pigs**

# MD2

**16" - 48"**  
**406mm - 1219mm**

**Options**

The **MD** series are available in either the standard **MD2** or the heavy duty **MD4** design and in sizes 2" through 48".

- Bumper noses are available to prevent damage to both the pig and in-line auxiliary equipment.
- Gauging plates can be custom made to suit your application and are available in aluminum or steel, slotted or standard.
- Transmitter cavities for tracking equipment can be custom fit for most sizes.

**Description**

The **MD** bi-directional pigs are designed to be both economical and efficient for use in medium length pipeline construction applications such as water displacement, swabbing or line clearance duties.

Also useful for separation, batching and during the hydrostatic test stage of construction. Designed to run in either direction, the operator can both fill the line with water and then displace the water without removing the pig.

**Features**

**MD** series, in sizes 16" and larger, are equipped with either two or four disc combinations, bolted to a rugged steel mandrel. Typically, the longer the pig run the more discs you would install.

Sealing discs experiencing wear after traveling one direction, can reverse direction without compromising their sealing characteristics. All discs are produced from Apache's special blend of wear resistant polyurethane.
