

Description

The **UM** series are well-built, steel bodied pigs designed for a variety of pipeline applications. General uses include batching, condensation removal, purging or light cleaning. These batching pigs will also traverse pipeline anomalies of up to 25% without damage to the inline auxiliary equipment.

Features

The **UM** series are also available in 3 or 4 cup configurations for longer pig runs.

The **UMX** version consists of easily mounted cleaning brushes or blades to further enhance the cleaning function of the pig.

Batching Pigs

UM2

16" - 48"
406mm - 1219mm

Options

- Gauging plates of aluminum or steel, and either in slotted or standard styles.
- Spring loaded wire brushes or blades for the removal of unwanted paraffin or debris.
- Transmitter housings to accommodate tracking equipment.
- By-pass holes to control the pig's speed or as jet ports to keep debris suspended in front of the pig.
