

Batching Pigs

UC2

2" - 14"
51mm - 356mm

Options

The **UC** series are available in 2" (51mm) through 14" (356mm) sizes and can be easily configured with additional sealing elements to suit individual applications.

- Gauging plates of aluminum or steel, and either in slotted or standard styles are available.

Contact Apache for recommendations on specific applications.

Description

The basic 2 cup and 3 cup **UC** pigs are generally used for batching of dissimilar fluids. The 4 cup version **UC** pigs provide positive seal between dissimilar fluids and are typically used for longer distance operations and for light cleaning of pipelines.

Cups can be changed or adapted to different configurations as the application dictates.

Features

The 2 cup design **UC** pigs can traverse 1.5D bends. The 3 cup design of this pig provides a positive seal between fluid interfaces while the 4 cup design is widely used for light cleaning of pipelines or batching/separation operations.

The unique design of the Apache cup provides both the cleaning advantages of a scraper cup and the flexibility of a conical cup.
