

Description

The basic 2 cup and 3 cup **UC** pigs are generally used for batching of dissimilar fluids. Different configuration of the 4 cup **UC** provides positive seal between dissimilar fluids and typically used for longer distance operations and for light cleaning of pipelines.

UC pigs can easily accommodate either brushes or blades. Cups can be changed or adapted to different configurations as the application dictates.

Features

All 16" - 48" **UC** pig mandrels have multiple by-pass holes designed to control the pig's speed or as jet ports to keep debris suspended in front of the pig. Plugs are used to easily regulate the by-pass volume.

UC pigs are equipped with durable polyurethane Apache cups. The large wear surface of the cup promotes longer life while the product pressure keeps the cutting edge firm against the pipe wall.

Batching Pigs

UC3

16" - 48"
406mm - 1219mm

Options

- Gauging plates of aluminum or steel, and either in slotted or standard styles.
- Transmitter housings to accommodate tracking equipment.
- Spring loaded wire brushes or blades for the removal of unwanted paraffin or debris are available in **UCX** models.
