TRAXALL LineStat

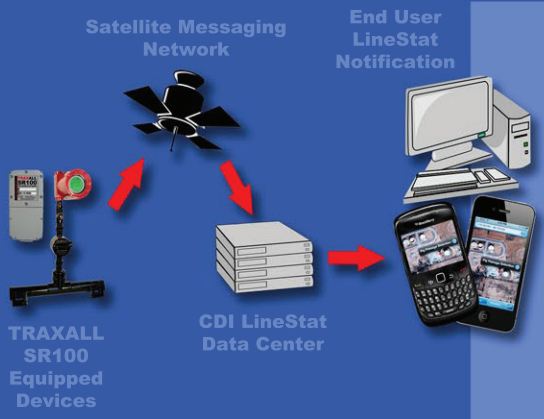
Service Overview

NOW AVAILABLE AT

Apache PIPELINE PRODUCTS

LineStat is an exciting satellite notification service offered by CDI within the TRAXALL family of products and services.

The LineStat Service



CDI's LineStat is a stand-alone service that allows for user notification of pig passages and other types of events through emails or SMS text messages via a worldwide satellite network.

When a pig passes any of CDI's products they now have the ability through LineStat to transmit a notification to one or more users immediately — right to their email inbox, Blackberry, iPhone, etc.

The TRAXALL SR100 satellite radios transmit GPS coordinates of the triggering system which LineStat uses to produce a detailed notification message. This message includes local time, time zone, GPS position, and an overhead satellite image of the system's present location. The user may optionally follow an Internet link in the notification to an interactive Google Map of the current job.

LineStat satellite radios may be fitted to any of CDI's products, whether mobile or stationary, creating a new, powerful, and timely means of notifying field crews, management, and customers of your job's progress.

The SR100 Radio

TRAXALL SR100 Satellite Radio

The TRAXALL SR100 GPS-equipped satellite radios can be used for a broad range of asset monitoring, tracking and notification purposes. The radio is small, light and operates for over three years on a single set of lithium batteries. Wide temperature range and Class 1 Division 1 explosion-proof rating are standard.

With global satellite network coverage that is independent from any cellular network, the TRAXALL SR100 just works, day or night, wherever you are.

The Cost

CDI CD47C AGM with TRAXALL SR100 Satellite Radio

CDI offers a fixed, predictable and affordable pricing structure for the LineStat hardware and notification service.

Each satellite radio is purchased one time and the satellite messaging service is provided for a fixed period of two to five years. Month to month fees to a third-party satellite provider are not necessary; CDI handles all of the back-end details for you so that you can do your work without the hassle of a monthly billing cycle or reoccuring cost justifications to management.
