ABOUT CDI	

#### WARNING

Any operation involving work on pipelines containing gases or liquids under pressure is potentially hazardous. It is necessary, therefore, to follow correct procedures in the use of this equipment to maintain a safe working environment.

No person should use this equipment unless fully aware of potential hazards of working with pressurized pipelines and trained in the procedures stated in this manual.

The purchaser of this equipment is responsible for the training and competence of operators and the manner in which it is used.

Contact CDI immediately should any difficulty arise in the use of this equipment.

#### WARNING

Always use caution when opening any CDI transmitter that has been in a pressurized environment.

It is possible for pressurized liquid or gas to leak into a transmitter and remain there even after the transmitter has been removed from the pipeline.

Always point the transmitter away from yourself or others when opening a cover or end cap.

## INTRODUCTION

This User Guide is designed to instruct you in the function, capabilities, use, and care of CDI X400-Series multifrequency pig-tracking transmitters.

## OVERVIEW

#### Electromagnetic pipeline pig location and tracking transmitters

TRAXALL Multi-frequency transmitters operate by emitting electromagnetic fields at a very low frequency (between 17 and 32Hz) as well as the industry-standard 22Hz. This makes them safe and reliable for use in any onshore or offshore environment and any pipeline product (water, oil, gas, ammonia, carbon dioxide, etc.).

**The X400** is a TRAXALL-compatible electromagnetic pipeline pig-tracking transmitter that offers both programmable frequency and power control through CDI's proprietary FieldLink wireless communications system.

**Frequency Control** allows the operator to configure the transmitter to one of TRAXALL's seven colorized frequencies, or the 22-Hz legacy frequency for backward compatibility with CDI's CD42 receiver or competitive receivers.

**Power Control** allows the operator to directly manage a tradeoff between X400 range vs. battery life. For example, you can set output power to maximum for short runs/long range, or reduce output power for long runs/long battery life.

**FieldLink** is CDI's proprietary wireless communications network. Each X400 transmitter comes with a built-in radio frequency antenna. By connecting a supplied radio frequency USB key, any Windows PC or laptop can be used to configure the X400.

## Configurator

*Configurator* is a Windows application that will let you customize frequency, pulse rate, and output power of your transmitters via FieldLink wireless communication.

Requirements:

- PC or laptop computer with Windows<sup>®</sup> 7 or 8 (32-bit or 64-bit]
- Configurator software\*
- FieldLink USB device\*\*
- Adobe<sup>®</sup> Reader<sup>®</sup> is required to access PDF documents
- \* Available download from CDI website
- \*\* Supplied by CDI

#### **GETTING STARTED**

Your transmitter requires little in the way of preparation. Simply install fresh batteries and then run *Configurator* to set transmission signal or power performance, and your transmitter is ready for a pigging run.

## PREPARE TRANSMITTER: POWER

## End Caps

All CDI transmitters have a knurled threaded cap on each end. To prepare the X400 for operation you will need to momentarily remove these caps to access the batteries and configuration antenna. Observe nomenclature on transmitter case to determine correct cap, battery quantity, and battery polarity. Battery and antenna end caps are not interchangeable (antenna caps are left-hand threaded) but removal and replacement procedures are similar.

The X400 is available in 2D, 3D, 4D, and 5D versions. They differ in performance, case dimensions (length) and number of batteries required, but configuration and battery installation procedures are essentially the same for all versions.

**ANTENNA CAP** 

**BATTERY CAP** 

Always observe these precautions before removing any transmitter end cap:

Ensure immediate environment is free of explosive gases, liquids, or other substances.

Use caution when opening any CDI transmitter that has been in a pressurized environment.

It is possible for pressurized liquid or gas to leak into a transmitter and remain there even after the transmitter has been removed from the pipeline. For this reason, always point the transmitter away from yourself or others when opening a cover or end cap.

As it is possible for liquids to be present within cap threads, point transmitter downward to drain liquid out of and away from transmitter components or batteries.

#### **Remove Battery Cap**

Unscrew battery cap by turning counter-clockwise (CCW).

NOTE: Transmitters have no "ON/OFF" switch, but are activated when batteries are installed and battery cap is replaced. Therefore, install batteries only when you are about to configure transmitter or beginning a pig run.

#### Load Batteries

X400 Series transmitters are powered by D-Cell alkaline batteries.

**NOTE:** It is good practice to always install fresh batteries before deploying any pipeline pigging device.

All batteries are to be inserted positive (+) end first as shown:

- X400-2D: Insert two (2) D-Cell batteries
- X400-3D: Insert three (3) D-Cell batteries
- X400-4D: Insert four (4) D-Cell batteries
- X400-5D: Insert five (5) D-Cell batteries

Battery quantity and polarity are marked on each transmitter case:

Replacing cap (see following pages) completes the battery circuit and activates the transmitter.

#### **Replace Battery Cap**

#### Inspect Threads

Before replacing cap, inspect cap threads, transmitter case threads, and O-ring groove.

All threads must be free of

- dents
- deformities
- ruptures
- nicks
- scratches
- dirt
- foreign objects

or anything else that might interfere with a proper seal.

Inspect O-Rings

Ensure O-ring is serviceable. A brittle and/or deformed O-ring may not properly seal. If in doubt, replace it.\*

Lubricate O-ring with a light coating of high-temperature grease (such as Dow Corning MOLYKOTE® 44)

\* CDI Part No. 700-50-2034-70

#### **Reinstall Cap**

Screw battery cap onto transmitter.

Do not over torque. Hand tightening is sufficient as long as cap is sufficiently tightened against rubber O-ring to maintain a seal.

Replacing cap completes the battery circuit and activates the transmitter. Transmitter will remain energized until battery cap is removed.

# PREPARE TRANSMITTER: CONFIGURATION

You will need to have your transmitter powered and antenna cap removed to run Configurator.

Once transmitter is configured, the configuration settings are stored in the transmitter flash memory and you may power down by removing batteries until you are ready to place the transmitter into service.

#### **Remove Antenna Cap**

Unscrew and carefully remove the antenna cap.

**MOTE:** Transmitter antenna end caps marked as shown have LEFT-HAND threads. Turn CLOCKWISE to remove.

![](_page_12_Picture_9.jpeg)

WARNING: Do not attempt to unfold or otherwise handle the flexible antenna.

![](_page_12_Picture_11.jpeg)

#### Launch Configurator

Use Configurator If you wish to customize frequency, pulse rate, and/or output power of your transmitter.

Launch Configurator by clicking the icon on your PC desktop.

![](_page_13_Picture_4.jpeg)

The initial Configurator window will appear as shown here. *Transmitter, Transmitter Family, Signal Strength,* and other fields will be blank or indicate "N/A" until communication with a transmitter is established.

#### Activate FieldLink

FieldLink is CDI's proprietary wireless PC-totransmitter communications network you will use to program your transmitter.

Insert the FieldLink device\* into a USB port on your pc.

\* also known as a flash drive, memory stick, or "dongle"

A red LED on the device will flash every three seconds, indicating the device is seeking to establish a communication link with a transmitter.

![](_page_15_Picture_6.jpeg)

![](_page_15_Picture_7.jpeg)

#### Select Battery Chemistry

When Configurator detects a transmitter, it may ask you if the transmitter is powered by Alkaline or Lithium batteries. Click the appropriate button and then click "OK" to confirm.

Select Battery Chemistry	Select Battery Chemistry
Configurator is unable to determine which type of batteries are installed in the transmitter. Select battery type:	Configurator is unable to determine which type of batteries are installed in the transmitter. Select battery type:

NOTE: When batteries and battery cap are in place

- The transmitter itself will be activated and will stay active for the life of the battery. Removal of battery cap will terminate all transmitter function.
- FieldLink will be activated and for the next five minutes will seek to establish a communication link (see below).

#### Re-establishing FieldLink Communication

If FieldLink communication "times out" or is otherwise disrupted, this message will appear.

Should this occur, restart Configurator by momentarily removing and replacing battery cap to cycle transmitter power.

![](_page_16_Picture_7.jpeg)

If you are still unable to establish communication, you may need to replace batteries.

#### Time

Local time-of-day

\* See APPENDIX A, pg. 27, for Transmitter Behavior and Pulse Characteristics details.

#### Save Settings

When transmitter has been configured, select Save to Transmitter button to retain your transmitter settings.

#### **Replace Antenna Cap**

Inspect cap threads, transmitter case threads, O-ring groove, and O-ring (see pgs. 12–13). If threads and O-ring are serviceable, carefully lower the end cap over the flexible antenna circuitry until cap and transmitter screw threads meet.

![](_page_21_Picture_5.jpeg)

WARNING: Do not attempt to bend, tuck, fold, or otherwise handle the flexible antenna.

![](_page_21_Picture_7.jpeg)

![](_page_21_Picture_8.jpeg)

NOTE: Transmitter antenna end caps marked as shown have LEFT-HAND threads. Turn COUNTER-CLOCKWISE to replace. Screw antenna end cap onto transmitter. Do not over torque. Hand tightening is sufficient as long as cap is sufficiently tightened against rubber O-ring to maintain a seal.

![](_page_22_Picture_2.jpeg)

Your transmitter is now ready to be placed into service.

## Flange Kit

A flange kit\* included with your transmitter for mounting on a metal pig. Install the flange kit with Allen wrench and screws as shown.

![](_page_22_Picture_6.jpeg)

Note orientation of flange. This will position transmitter coil outside the pig (see following page).

![](_page_22_Picture_8.jpeg)

# PLACING TRANSMITTER INTO SERVICE

## **Metal-bodied Pigs**

Transmitters must be mounted outside the metal casing. A transmitter flange must be installed.

- Mount the flange kit to the transmitter
- Mount the transmitter to the mounting plate
- Mount plate securely to the pig with transmission coil facing outward

![](_page_23_Picture_7.jpeg)

#### Foam and Plastic Pigs

- Remove plug or bolt
- Place transmitter in cavity (either direction)
- Replace plug or bolt

![](_page_23_Picture_12.jpeg)

# PLACING TRANSMITTER INTO SERVICE (cont.)

## Checklist

Before placing a transmitter into service, always ensure that:

- Batteries are fresh and of proper size and type (see pg. 11).
- Battery polarity is properly observed.
- Serviceable O-rings are installed. Brittle and/or deformed O-rings may not properly seal, thus compromising case integrity.
- Transmitter case, caps, and cap threads are clean and free of dents, ruptures, or other damage which could compromise the transmitter components.

# TROUBLESHOOTING

#### **Connection and Communication**

CDI transmitters, when supplied with fresh batteries of the proper type and size, should automatically connect to the FieldLink interface on your PC and display the transmitter serial number.

To conserve battery power during a pig run, the FieldLink radio is deactivated after five minutes if no connection has been established. To reactivate FieldLink, the device must be power-cycled by removing and reinstalling batteries.

If your transmitter fails to establish communication after following all battery installation and Fieldlink configuration procedures, it will be necessary to contact CDI at 1-800-580-4234 or 918-258-6068 for product support.

## **REMOVING TRANSMITTER FROM SERVICE**

WARNING:

![](_page_25_Picture_8.jpeg)

![](_page_25_Picture_9.jpeg)

#### WARNING

![](_page_25_Picture_11.jpeg)

Always ensure immediate environment is free of explosive gases, liquids, or other substances.

Always use caution when opening any CDI transmitter that has been in a pressurized environment.

It is possible for pressurized liquid or gas to leak into a transmitter and remain there even after the transmitter has been removed from the pipeline. For this reason, always point the transmitter away from yourself or others when opening a cover or end cap.

As possible for liquids to be present within cap threads, point transmitter downward to drain liquid out of and away from transmitter components or batteries.

## **APPENDIX A: TRANSMITTER BEHAVIOR**

#### **Frequency & Power**

Whether in Constant or Pulse mode, an active transmitter is sending a signal at a frequency ranging from about 15 to 30 Hz (with 22Hz being the traditional or "legacy" frequency).

The Power slider control increases transmitter range (at the expense of battery life). Here, we see a transmitter set to run at 50% power. Therefore, one complete cycle (Hz) consists of equal "positive" and "negative" duty cycles. (Assume a constant battery voltage regardless of settings.)

	one comp	olete cycle (Hz)
Trasmitter Behavior		
Frequency : Transmitter 3 💌		
Power (Min) : (Max)		
Mode : C Constant 📀 Pulse		-

As the Power slider is moved to the right, transmitter power is increased. A 90% power setting would resemble this:

![](_page_26_Figure_7.jpeg)

#### Pulse Characteristics

When Pulse mode is selected, Width and Repeat settings are accessible.

They affect duration and spacing of transmitter signals.

On Time Width :	 	21 mSec
Off Time Width :	 	21 mSec
On Pulse Repeats	Off Pulse Repeats :	0

#### ON/OFF Time Width

Sets duration of on and off cycles. At *On Time Width,* transmission occurs. At *Off Time Width,* there is no transmission.

![](_page_27_Figure_7.jpeg)

#### **ON/OFF** Pulse Repeat

Sets number of on and off cycles to repeat	
ON Pulse Repeats: 3	ON Pulse Repeats: 3

#### WARRANTY

All equipment sold by Control Devices, Incorporated (CDI) is warranted for a period of one (1) year from the date of shipment to Purchaser, providing the instrument or equipment has not been modified, abused, or used for purposes which it was not designed for.

Batteries, probes, leads, magnets, and other consumables subject to wear are not covered by this warranty. CDI will repair or replace faulty equipment during the warranty period when the cause is a defect arising from faulty design, materials or workmanship.

## Making a Warranty Claim

Equipment being considered for warranty repair, or a representative sample thereof, must be returned to CDI at the Purchaser's expense. The equipment must be accompanied by the Purchaser's written order\* describing the defect(s) and authorizing CDI to invoice the Purchaser for any charges not covered by the warranty.

Upon receipt of the equipment and Purchase Order, CDI will examine the equipment and make a determination of the nature and cause of the defect. If the defect is not covered by the warranty, CDI will quote to Purchaser the cost for replacement or repair equipment, and will not proceed until Purchaser delivers a written acceptance of the quotation.

During the one year warranty, CDI will bear the cost to return units repaired under the warranty back to the Purchaser's domestic premises. CDI will return units to foreign countries at Purchaser's expense.

\* Contact CDI at 1-800-580-4234, ext 143 for CDI RMA Form FM-03-0089

## CARE, MAINTENANCE, AND SERVICING

Equipment designed by CDI is protected against the environment in which it is intended to operate. Much of the equipment is designed for prolonged use in the field without any special maintenance other than routine battery replacements. It is the Purchaser's responsibility to insure that proper precautions are taken during installation and operation so that weather seals are in place, routine maintenance occurs, etc. Failure to perform these operations nullifies this warranty.

CDI equipment should only be operated by qualified personnel who are familiar with any and all manuals and procedures for said equipment's operation.

#### Service and Repairs

Cost for repairs not covered by the warranty or carried out after the warranty period has expired will be charged at the current hourly or set service rate, plus the cost of materials, upon approval by Purchaser.

Equipment for repair must be sent at the Purchaser's expense and be accompanied by the Purchaser's written order describing the defect and authorizing CDI to invoice the Purchaser for labor, materials and return delivery cost.

No service or repair will be undertaken until an approved written order is received from the Purchaser.

Operating equipment while in a damaged condition nullifies this warranty.
